

## NHS MEDICAL POLICY

### Kyphoplasty and Vertebroplasty Procedure 2015-009

**Kyphoplasty and vertebroplasty involve the percutaneous injection of bone cement under image guidance into a fractured vertebra. Specific to kyphoplasty, inflatable bone tamps are placed into the fractured vertebral body to create a low-pressure cavity in which bone cement is placed to reduce the fracture.**

**Percutaneous kyphoplasty or vertebroplasty may be indicated when any ONE of the following is present:**

|   |  |
|---|--|
| 1 | <p>Vertebral compression fracture with ALL of the following documented:</p> <ul style="list-style-type: none"> <li>• The fracture is symptomatic.</li> <li>• The fracture was identified by MRI.</li> <li>• The fracture is estimated to be new, acute or up to approximately 3 months old.</li> <li>• One or more fractures may be treated concurrently.</li> </ul> |
| 2 | <p>Osteolytic (bone destroying) spine lesion with ALL of the following documented:</p> <ul style="list-style-type: none"> <li>• The lesion is related to multiple myeloma or metastatic malignancy.</li> <li>• The lesion is symptomatic or there is risk of damage to adjacent structures.</li> <li>• One or more lesions may be treated concurrently.</li> </ul>   |
